How Career Choice Works

- Pre-pays 95% of tuition and fees
- One year of continuous employment required
- Available to full-time and part-time employees
In-demand and Well Paid Career Paths
CPR (Infant)

1. Verify that the infant is unresponsive and is not breathing or is only gasping.

2. Ensure that the infant is face-up on a firm, flat surface.

3. Give 30 chest compressions.
   - Push hard and fast in the center of the chest, a bit below the breastbone and above the navel, at a rate of about 150 compressions per minute.

4. Give 2 rescue breaths.
   - Open the airway and make a connection with your mouth and the infant's mouth and nose.
   - Blow into the infant's mouth, ensuring that chest rises.
   - After giving the rescue breath, check to see if the chest falls after a breath.
   - If the chest doesn't fall, check if the infant is breathing or gasping.

5. Continue giving sets of 30 chest compressions and 2 rescue breaths.
Creating an Upskill Life Cycle

We aim to enable entry level employees to move into upwardly mobile careers.
